Summary

Graduated in Systems Analysis and Development from Senac, with experience in software development, particularly in front-end. Committed to coding best practices, I apply Clean Code and SOLID principles to ensure project quality and maintainability, as well as develop manual and automated tests to guarantee solution reliability.

My work ranges from project conception, collaborating with clients to understand their needs, to final delivery in production. I am responsible for technical documentation, code reviews, and technical support, contributing to team knowledge sharing and fostering a collaborative environment.

With excellent communication skills, I work seamlessly with teams, partners, and clients, ensuring alignment and efficiency in development. I am organized, manage my time effectively, and focus on delivering high-quality results while consistently meeting deadlines.

Professional Experience

On2
Software Developer | Web Analysis and Development | Full Frontend
March 2021 - Present

- Development and maintenance of front-end solutions for large-scale projects, including the Toyota website for Brazil and Argentina.
- Implementation of dynamic and responsive interfaces with React.js, Next.js, and Styled Components.
- Integration of APIs (GraphQL and REST) and maintenance of scalable systems.
- Mentoring and supporting team members, assisting in technical development and continuous learning.

Leef Tecnologia em Negócios
Software Analyst
November 2020 - March 2021

- Development of modules for the Protheus ERP system (TOTVS) using AdvPL, focusing on Inventory, Purchasing, Billing, and Financial modules.
- Implementation of customized solutions for system integration and specific client requirements.

Aceleradora Ágil
Software Development Intern
March 2020 - November 2020

- Development of web applications using JavaScript, Java, and PostgreSQL.
- Remote work in collaboration with multidisciplinary teams, developing time management and self-management skills.

Codeby/Laborit
Freelancer
August 2019 - October 2020 (Temporary)

- **Email Templates:** Developed various customizable email templates for marketing campaigns, using technologies such as MJML and HTML. Ensured the templates were responsive and visually aligned with the brand identity, which helped increase click-through rates and conversions in campaigns.
- **Promotional Templates for E-commerce on the Vetex Platform:** Collaborated with the team to create and implement promotional templates on the e-commerce website using the Vetex platform. This involved designing and developing landing pages and promotions that helped boost sales during specific campaigns.
- **React Native and Expo Development:** Focused on creating quick and efficient cross-platform solutions for projects.

Education

Senac RS
Technologist in Systems Analysis and Development (2019 - 2022)

Course focused on software creation and maintenance, encompassing programming, databases, and web development, with an emphasis on agile methodologies and security practices.

Projects

- **Toyota Project (On2):** Development of the Toyota website for Brazil, Venezuela, and Argentina, implementing responsive and accessible solutions.
- **Descarte Certo (GitHub):** Project focused on developing an application for proper waste disposal.
- **GitHub:** GitHub profile.

Technical Skills

Frontend: React.js, Next.js, JavaScript, TypeScript, CSS, SASS, Styled Components
Backend and APIs: Node.js, GraphQL, REST, Spring Boot
State Management: Redux, Context API, Custom Hooks
Testing: Jest, React Testing Library
Containers and Deployment: Docker, Vercel
Databases: MySQL, PostgreSQL, MongoDB, Oracle
AWS Services: Lambda, S3, EC2
CI/CD: GitHub Actions, Jenkins

Additional Skills

- **Agile Methodologies:** Experience with SCRUM and Kanban
- **Communication and Teamwork:** Ability to collaborate with multidisciplinary teams and contribute to problem-solving
- **Proactivity and Problem-Solving:** Focused on identifying and resolving issues efficiently
- **Adaptability and Quick Learning:** Capable of adapting to new technologies and project changes
